THE LATEST IN MARINE ENVIRONMENTAL TECHNOLOGY

MSC Cruises is committed to protecting the oceans, because they are one of the planet's most precious resources. Therefore, all MSC Cruises ships are equipped with modern technology and advanced engineering to lower their impact on the environment. MSC Grandiosa is setting the standard for the future as she is equipped with some of the latest cutting-edge environmental technology and has been designed to meet the world's strictest environmental standards set by the International Maritime Organization (IMO), with features including:

Hydrodynamics: latest generation azipods® (an electrically driven propulsor) with reduced fuel consumption, which reduces emissions.

Advanced waste management: comprehensive systems to reduce, recycle and reuse all waste on board.

Advanced wastewater treatment: the system treats and purifies wastewater to a very high quality
Smart heating, ventilation and air conditioning system (HVAC): two high- and low-heat recovery loops to intelligently redistribute heat and cold from the laundry room and machinery spaces to warm up the swimming pools or other parts of the ship.

Hybrid Exhaust Gas Cleaning System (EGCS): This system essentially “cleans” the ship’s exhaust gas resulting in 98% less sulphur oxide (SOx) through a system which can operate in closed loop for responsible on-land removal

Selective Catalytic Reduction system: 90% less nitrogen oxide (NOx) through active emission control thus reducing the NOx emissions.

Shore-to-ship power: fully ready to connect to local power grid to reduce emissions while the ship is at berth in port.

Energy-saving LED lighting: all MSC Cruises ships use only energy efficient LED and fluorescent lighting.

Smart heating, ventilation and air conditioning system: two high- and low-heat recovery loops to intelligently redistribute heat and cold from the laundry room and machinery spaces to warm up the swimming pools or other parts of the ship.

Trim optimisation: a software application to monitor and optimise trim, the ship’s stability, in real-time. This technology supports ship officers to keep the vessel’s trim optimised to reduce fuel consumption and optimise performance.

Hull paints: the hulls of all MSC Cruises’ ships are coated with special environmentally-friendly paints which impedes the growth of barnacles, algae and marine organisms in order to reduce drag significantly.

Ballast water treatment system: a system to avoid introducing into the oceans invasive aquatic species through ballast water.

Energy-efficient hull and overall design: 28% less fuel compared to Fantasia Class ships, which represents a reduction of 255kg carbon dioxide per guest, per cruise.

TWO ORIGINAL NEW SHOWS

COSMOS - Journey to the Unbelievable

Reach for the stars alongside the young explorer as he connects with his spirit of adventure, travelling through the stars and his childhood memories before landing on the realisation that sometimes you need to travel far to come home. The co-pilots on this fantastic voyage are a galaxy of illuminating characters who are every bit spaced-out and other-worldly as they are kind and friendly.

COSMOS explores the feeling of traveling at night on the high seas on a majestic cruise ship. The view is both mind-boggling and mesmerizing. The vastness of the sky is as fathomless as the deep blue ocean underneath.

The brand new acrobatic performance 'Ginger Rope' in COSMOS sees three artists use a unique acrobatic apparatus developed specifically for the show. Aerialists will fly gracefully in orbit on the rotating stage on moving ropes embodying rings around the planets.

AN ENHANCED VENUE: THE CAROUSEL LOUNGE

The shows will be performed in The Carousel Lounge: a purpose-built entertainment venue hosting just over 400 guests per performance. This venue was specially designed to meet the needs of the Cirque du Soleil at Sea artists as well as bringing guests closer to a spectacular display of acrobatic flair and artistic finesse - creating a truly immersive experience that guests will never forget.

New elements in the Carousel Lounge on MSC Grandiosa include:

- **The addition of 80 kinetic LED spheres** offer a change to the atmosphere of the Carousel Lounge at specific moments during the shows and to create a large array of visual effects. The moving LED lights are spread across the space to provide depth and a visual background for the audience sitting across the room
- **A new 2 metre lift in the center of the unique 360° rotating stage** was developed by the design team as a way to bring more focus on solo ground acts as it raises the juggling act for COSMOS and the contortion act on EXENTRICKS higher above the stage floor

EXENTRICKS - Expect the Unexpected

Led by a colourful cast of quirky characters, it's all hands-on deck as you could very well be invited to jump right into the action! The excitement begins as a stylish and orderly extravaganza before suddenly careering off course into a hilarious pageant when the star performer is suddenly unable to continue. Scrambling to find a replacement, the Master of Ceremonies holds auditions.

EXENTRICKS is inspired by the essence of the circus arts with big colorful characters brimming with style, personality and amazing abilities.

For the first time for any Cirque du Soleil at Sea show, EXENTRICKS will put guests in the centre of the show with audience participation playing a vital role in the story, bringing MSC Cruises guests closer to the artists than ever before. As they get to interact with these extravagant and fun characters, they get the opportunity to enjoy on the edge-of-you-seat acrobatics.

ZOE, developed in partnership with HARMAN and Samsung Electronics, is MSC Cruises' industry leading voice-enabled artificial intelligence (AI) found in every cabin on MSC Bellissima and soon on MSC Grandiosa. Speaking seven languages (English, Italian, French, German, Spanish, Brazilian Portuguese and Chinese mandarin), she can answer hundreds of questions about the cruise and can provide information about onboard facilities, provide guidance and suggestions and help book services.

Just say 'Ok Zoe' to activate, wait for the acoustic signal and then ask a question; for example to show around the cabin, information about the SPA, Guest's expenses or to turn on the in-cabin smart TV. For the moment, Zoe cannot answer questions on topics related to the outside world or beyond MSC Cruises, such as daily news or sports results.

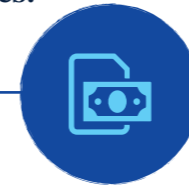

MSC for Me is a multi-channel digital programme that enables guests to interact with the ship and its crew members anytime, anyplace to better serve their needs, save them time and really allow them to get the most out of their holiday.

This year saw the introduction of ZOE, the world's first virtual personal cruise assistant, to MSC for Me ecosystem - a truly ground-breaking AI voice activated technology available to every guest in every cabin of MSC Grandiosa.

Alongside ZOE, MSC Cruises has introduced a number of new guest-centric digital innovations to its industry-leading connected guest experience in 2019:

Guests can begin to plan their time aboard by adding selected **pre-booked experiences** to their pre-cruise personal agenda, whether it be excursions, specialty restaurant reservation or that exciting Cirque du Soleil at Sea show.

Pre-registering of a credit card through the app prior to the cruise is then one less thing that guests need to do when they embark, giving them more time to enjoy their holiday once on board.

FAMILY AND FRIENDS LOCATOR

This new paid-for service means family and friends travelling together will never get lost – guests can purchase a special MSC for Me wristband with Bluetooth Low Energy technology and see where one another are at any time on the ship map shown on their MSC for Me app. This new feature is in addition to the Kids Locator service introduced in 2017, where parents can keep track of their kids onboard by seeing their location.

MSC FOR ME CHAT

Guests are now able to message each other directly through the MSC for Me app, without the need for an internet package. To begin chatting, guests simply scan the QR on their app of their friend and begin discussing where to meet-up for a pre-dinner drink or afternoon cocktail.

WHAT TO EAT

A handy 'what to eat' feature has been added to the MSC for Me app to give guests insight into the local must-eat ingredients or dishes as they cruise from destination to destination. For example, in Barcelona, try "LA BOMBA", one of Barcelona's most iconic tapas dishes, a potato croquette served with two different sauces: a white garlic aioli and a rich and spicy tomato sauce.

In addition to the new features introduced this year, MSC for Me also offers:

Mobile check-in to save time on embarkation day for simple transition from ashore to onboard

Navigating the ship with an interactive map on the MSC for Me app helps guests get around the ship quickly and easily with step-by-step instructions
